

Lesson Plan

Amazing Agates

Science Week Activity

In this video we will use Primecolour Pearlescent Watercolours to explore geology and paint a shimmering Agate slice.

Steps

1. Brush a circle of water on your watercolour paper and then paint on a layer of pearlescent paint. The water on the paper will help make the paint disperse.

2. Continue creating alternating bands of pearlescent paint making some bands broader and some narrower. You can also add clusters of spots to add some detail.

3. Use a mixture of colours to create the crystallised centre and leave your agate slice to dry.

Materials

- Primecolours Pearlescent Watercolours (PTZ726-18)
- Handmade Watercolour Paper Round (PA706)
